The Fyre-Tec Steel Window Warranty

Fyre-Tec's standard warranty provides a three year protection plan for the steel windows provided. The windows are warranted to be delivered to the installing contractor free from defects in material and workmanship. The intent of the extended warranty is to include structural failures, water leakage, air infiltration, faulty operation, and deterioration of materials beyond normal weathering. There are certain exclusions stated in the warranty, and it is advised that the purchaser request and review a copy of the document to determine if the product is suitable for the proposed installation.
